

UTM

Ensure reliable, secure VOIP calls

Add on to SD-WAN 2.0
Included in SD-WAN 3.0

With UTM you have full traffic inspection. It will look at headers and fully inspect the traffic for any signs of a known virus, a malware signature, or phishing attempt. It will also strip out sensitive information such as SSC and CC numbers.

This means that the traffic is being fully decrypted and what is being inspected is the actual content of the traffic before it enters your network. This type of inspection allows for a much more granular look into the type of content your end users are viewing and allows you to protect them further.

Simplewan. PLATINUM

Features

- Cloud based
- Access Control
- AD Integration
- Download Control

Benefits

- Easy Policy Creation & Management
- Real Time Visibility
- Advanced Threat Protection
- SSL Inspection
